Society for AeroSpace & Space Technology

Department of Design

About the Department

The Design Department is responsible for bringing ideas, research, and technical concepts to life through visual design and functional modelling. Our work bridges creativity and engineering ensuring that every aerospace or space-related project not only works efficiently but also communicates clearly through intuitive visuals and well-structured interfaces.

We operate across both UI/UX Design and AutoCAD Modelling, handling everything from interface mockups for simulation tools or websites to detailed CAD models of aerospace systems. The department's focus lies in precision, usability, and clarity, enabling other teams to visualise, test, and present their ideas effectively.

Why Join this department ?

If you're someone who enjoys design that has purpose and precision, this department will push both your creativity and technical thinking.

As a member, you'll:

- Learn UI/UX design principles to create user interfaces for aerospace tools, mission dashboards, and data visualisation platforms.
- Work on AutoCAD-based modelling, building detailed 2D/3D representations of satellites, propulsion systems, and other aerospace mechanisms.

- Collaborate directly with research, software, and mechanical teams to convert engineering ideas into interactive or visual forms.
- Build a strong portfolio through real world projects, design reviews, and team collaborations that simulate industry workflows.

Joining this department means growing as both a designer and problem-solver, with practical experience in fields that blend aerospace, technology, and design thinking.

Future Projects

1. SAST's Official Mobile App
2. Prototyping for IRC, Project Falcon. (Includes AutoCAD)
3. More things on suspense !

If you can imagine spacecraft designs before they're built, or if you see interfaces not just as screens but as experiences the Design Department is where you belong.
